# Audio Devices

Avaya Spaces has built-in AI noise reduction. This dramatically enhances the meeting experience by removing unwanted sounds such as dogs barking or outside noises. Avaya also has a complete line of professional purpose-built conferencing devices (B109, B129, B199), that ensure that every word is heard clearly—which is extremely important for virtual meeting interactions. Avaya’s unique OmniSound® technology adapts to the environment to provide the highest quality audio experience.

## Desktop Devices

Enable your employees to offload their meetings onto a purpose-built device with the Avaya Vantage portfolio of desktop collaboration devices. Avaya Vantage™ is completely integrated with Avaya Spaces™ and offers several additional productivity-boosting innovations:

**Unique screen shifting technology:** With new “screen shifting” technology, users via HDMI can shift content and video to a larger screen based on changing meeting dynamics. For presenting content from Avaya Vantage, one touch on the device opens the meeting in a presentation mode on the laptop. The “screen shifting” technology elevates user experience by extending native Avaya experience to external screen to provide a picture-by-picture view of video participants and content a user is sharing and is uniquely offered by Avaya Vantage.

**Enter meetings with one touch from the calendar:** It is integrated with Avaya Vantage™ built-in UC experience for a quick access to the Avaya Spaces app or to get a notification or join a Spaces meeting through Calendar integration – one touch meeting entry from the Calendar tab. On the Vantage device user can watch their teams’ Avaya Spaces tasks and posts, chat or send video message or in the direct message tab chat with their Spaces contacts as well

**Leverage an intelligent assistant for voice commands:** Avaya Vantage also comes with the Avaya Alexa Built-in app that is powered by the Alexa voice assistant. With Alexa Built-in on Avaya Vantage, you can find new ways to connect with just your voice! The addition of Alexa turns the Avaya Vantage device into a smart device. A user can ask Alexa what is on their calendar, ask to listen to a book on audible, and various other smart skills. For organizations using Alexa for Business there are additional capabilities provided to the user by accessing the organization’s private skills. They get a conversational interface to the services/ information with ability to also get visual response on the Avaya Vantage™ display. Private skills provide access into the organization tools and services, such as Salesforce, Jira etc. which can be used for training, providing information, assistance and much more.
